DuPont Zonyl® Fluoroadditives for Coatings

Fluoroadditives have been used in many coating systems as highly effective, multi-functional, easy to use and cost competitive additives. They can be used as film application and quality aids to improve wetting, leveling, open-time, anti-blocking. They also provide improved cleanability and oil repellency to the coating through surface modification. With the trend of low VOC and water-borne technology fluoroadditives have demonstrated to be very helpful in these paint formulations. Presented by Jean Meng from the DuPont Chemical Solutions Enterprise technology group.

Schlenk-Both Formulating with Metallic Pigments

The presentation starts with an introduction to the mechanism of light reflection from metallic pigment flakes. This leads to how different types of metallic pigments reflect light, followed by a discussion on formulation parameters affecting the brilliance of metallic pigments.

Max Hui is Technical Manager at Schlenk-Both Metallics since the dissolution of the MD-Both partnership in September, 2005. He was at the same position at MD-Both Industries for over 5 years. Max earned a M. S. degree in polymer chemistry from U. of Detroit. Prior to his involvement with metallic pigments, he holds various positions in the formulation of coatings, adhesives, sealants and screen ink.
